PRIZEPILOT

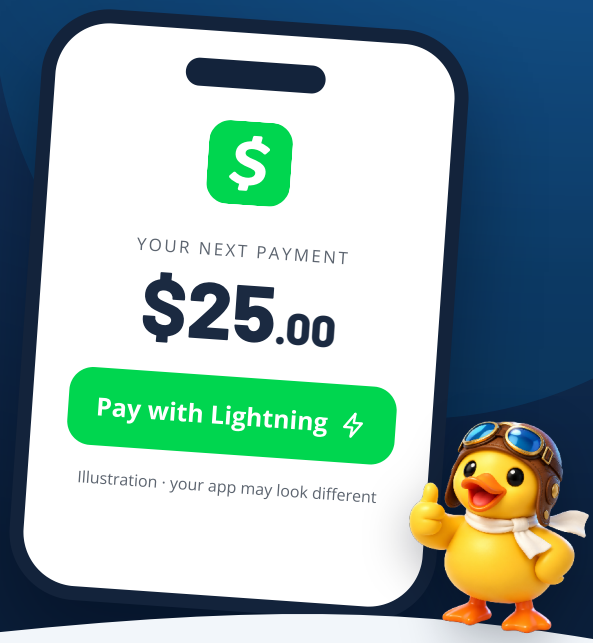

CUSTOMER QUICK START

YOUR PHONE IS ALL YOU NEED

Get Cash App. Get ready to play.

A quick guide to adding funds to your terminal with a Lightning payment — straight from your phone.

Cash App + Lightning

1 Download & set up Cash App

Get Cash App from your phone's app store. Follow the sign-up steps, link your funding source and add money to your Cash balance. Complete any identity checks the app asks for.

2 Scan the sign at your terminal

Use your phone's camera to open the terminal's funding page. Check the device and terminal name, choose an amount and tap **"Create payment invoice."**

3 Pay the invoice in Cash App

Open Cash App's scanner and scan the invoice QR. On the same phone, copy the invoice and paste it into Cash App's Bitcoin send flow. Choose **"Cash"** if that option appears; otherwise use your available Bitcoin balance. Review the amount and confirm.

4 Watch your terminal get funded

Return to the funding page. It shows **"Payment received,"** then **"Terminal loaded"** once the device confirms. If it is still loading, ask the cashier before making another payment.

Start here.

Scan to download Cash App

cash.app/download

Need a hand? Ask your cashier.

Lightning and payment options depend on your account and region. Use another supported Lightning wallet if Cash App cannot make this payment.

The terminal sign opens a web page. The payment invoice is a separate Lightning QR created for your amount. Cash App receives no $Cashtag payment in this flow. Eligible Cash App customers may pay from Cash; the room receives bitcoin. Review payment details before confirming. Cash App's interface and availability may vary. Cash App and BTCPay are independent services and are not affiliated with PrizePilot. Cash App payment guidance: cash.app/press/cash-unlocks-bitcoin-everyday-stablecoins
